KAIZEN CONSULTING

Sportswear & Footwear E-Commerce Intelligence Platform

UX Architecture & Product Vision

Tomas Ivers | Designer, Kaizen | Deliverable 2 of 6

DESIGN DOCUMENT | Closed Demo | Not for External Distribution

Product Vision

What this platform must do and why it must be trusted

PROBLEM

Sportswear and footwear e-commerce operations are losing revenue, customers, and brand equity to preventable product and service failures. Decision-makers lack a unified, evidence-grounded view of what is failing, where, and what to do.

VISION

A closed demo platform that transforms public review evidence and synthetic transaction analysis into decision-ready operational recommendations — trusted, transparent, and actionable for four distinct teams.

TRUST PRINCIPLE

Every insight must be traceable. Every data point must be labeled as REAL EXTERNAL EVIDENCE, SYNTHETIC DEMO DATA, HEURISTIC ESTIMATION, or INFERENCE. No ambiguity. No deception.

GOVERNANCE

The platform must reflect EU AI Act and GDPR principles: transparency, human oversight, purpose limitation, non-deceptive UX, and clear disclosure of AI-generated analysis at every interaction point.

User Roles & Decision Needs

Four teams. Four views. One shared evidence base.

OPERATIONS

WHO

VP Operations, Ops Manager

KEY QUESTION

Which issues are driving returns volume? Which brands need escalation? What is the overall return rate trend?

SEES IN PLATFORM

Return rate by brand/product, issue volume heatmap, escalation triggers, 4-week trend

CUSTOMER EX.

WHO

CX Director, CX Team Lead

KEY QUESTION

Where is customer satisfaction failing? Which products generate the most complaints? What follow-ups are pending?

SEES IN PLATFORM

Rating distribution, complaint clusters, return friction cases, CX action queue

PRODUCT QUALITY

WHO

Product Quality Manager, QA Lead

KEY QUESTION

Which product attributes are failing? Which brands need supplier review? What tickets are open?

SEES IN PLATFORM

Attribute failure heatmap, quality tickets, supplier escalation log, issue-to-product mapping

RETURNS TEAM

WHO

Returns Manager, Refund Ops

KEY QUESTION

What are the top return reasons? Where is return friction highest? What process changes are needed?

SEES IN PLATFORM

Return reason breakdown, friction flags, refund time analysis, process improvement log

1. EVIDENCE INGESTION

Public reviews, ratings, benchmarks labeled REAL EXTERNAL EVIDENCE

2. SYNTHETIC ANALYSIS

4,200 transactions, 1,200+ returns, issue clustering labeled SYNTHETIC DEMO DATA

3. ISSUE SURFACING

14-issue taxonomy mapped to brands, products, attributes, return drivers

Information Hierarchy & Progressive Disclosure

Reveal detail only when the user requests it

LEVEL 1 — DASHBOARD

Headline KPIs: overall return rate, top issue, priority recommendations count. No detail exposed.

LEVEL 2 — TEAM VIEW

Team-specific summary: brand heatmap, top 3 issues, 2-3 priority actions. Accessible via role selector.

LEVEL 3 — DRILL-DOWN

Issue detail: attribute, evidence, affected products, return volume, recommended action. Opened via accordion or card click.

UX PATTERN: Accordion + Drawer + Layered Card + Expand/Collapse — Never show Level 4 by default

Full evidence: source IDs, confidence notes, synthetic data disclosure, heuristic assumptions, scenario estimates. Accessed via 'View Evidence' drawer.

Trust & Governance UX Patterns

Building credibility into every interaction

DATA LABEL BADGES

Every metric, chart, and recommendation displays a colored badge: REAL EXTERNAL EVIDENCE (blue), SYNTHETIC DEMO DATA (orange), HEURISTIC ESTIMATION (grey), INFERENCE (purple).

CONFIDENCE INDICATORS

Every recommendation shows a confidence level (High / Medium / Low) and scenario type (Conservative / Base / Aggressive) inline with the estimate.

SYNTHETIC DISCLOSURE

A single, clearly placed notice identifies this as a demo platform using synthetic data. This is the only location where this disclosure appears, per client instruction.

HUMAN REVIEW GATE

A mandatory confirmation dialog appears before any operational action is executed. Text: 'This action was suggested by an AI system. Human review is required before proceeding.'

AUDIT LOG PANEL

Every action taken in the platform is recorded with: agent name, timestamp, action type, evidence basis, and whether a human approved. Accessible from the governance panel.

CORRECTION LOG

Manager agent corrections are surfaced in a 'Reconciliation Log' panel showing: what was inconsistent, what was corrected, and residual issues requiring human review.

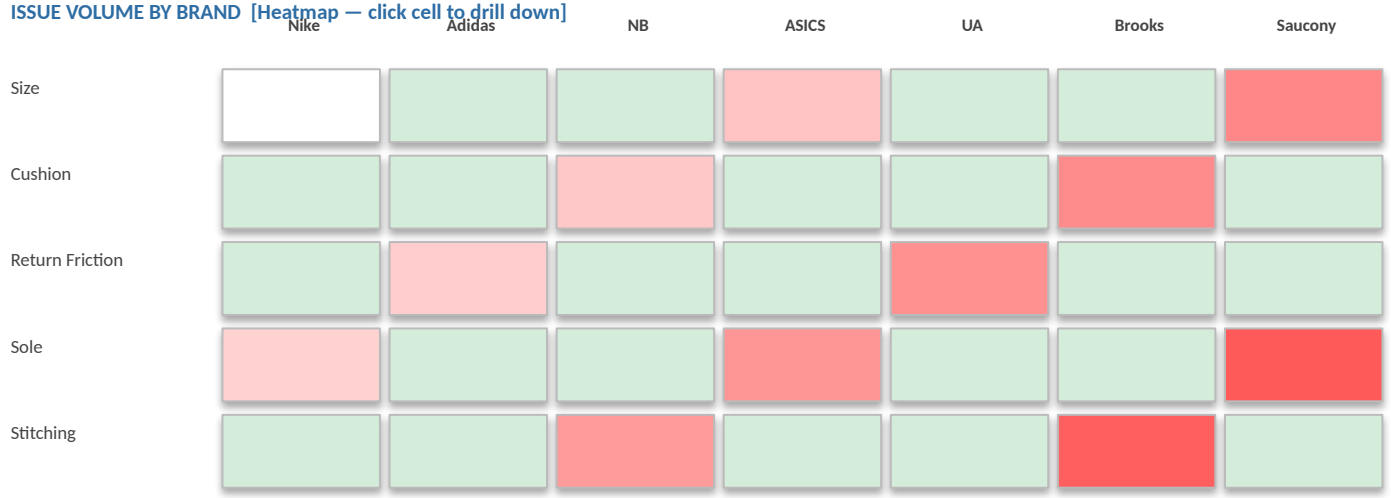
Wireframe — Dashboard View (Level 1)

Executive overview: headline KPIs and top priority actions

KAIZEN Intelligence Platform | Dashboard | Operations | CX | Product Quality | Returns | Agentic Console | Governance

RETURN RATE	TOP ISSUE	OPEN ACTIONS	AVG RATING	HIGH FRICTION
30.1%	Size Accuracy ISS-01	8 Recommendations	4.1 / 5.0	38% UA returns
SYNTHETIC DEMO DATA	REAL EXTERNAL EVIDENCE	HEURISTIC ESTIMATION	SYNTHETIC DEMO DATA	SYNTHETIC DEMO DATA

ISSUE VOLUME BY BRAND [Heatmap — click cell to drill down]



PRIORITY ACTIONS

- REC-01 Nike Pegasus — Review Sizing Guide
- REC-02 Adidas Ultraboost — QA Escalation
- REC-03 UA HOVR — Returns Process Fix
- REC-05 ASICS Kayano — Update PDP

[WIREFRAME — Illustrative layout only]

Agentic Workflow Console — UX Design

Making the 5-agent organization visible, inspectable, and governable

OUTPUT: Synthetic Dataset

4 COMMUNICATOR

Marcus Vale

Click to expand system prompt, inputs, outputs, handoff packet

OUTPUT: Exec Narrative

5 MANAGER

Sofia Laurent

Click to expand system prompt, inputs, outputs, handoff packet

OUTPUT: Final QA & Report

INTERACTION PATTERNS IN HTML CONSOLE

Click-to-expand agent cards | Handoff drawer (structured packet) | Workflow timeline | Packet inspection panel | Validation banners | Inconsistency flags | Correction log (Manager)
Each agent card shows: full name, role, system prompt, inputs, outputs, acceptance criteria, evidence used, assumptions, confidence notes, handoff to next agent, unresolved risks

Drill-Down & Evidence Panel Design

Progressive disclosure: from headline to source

ISSUE CARD — ISS-01 Size Accuracy | SEVERITY: HIGH | BRANDS: Nike, Adidas, New Balance, ASICS, Under Armour [EXPAND v]

EXPANDED ISSUE DETAIL (Level 3)

Attribute: Size accuracy Return Volume: 22% of all returns (SYNTHETIC) Avg Days to Return: 8.2 days (SYNTHETIC)

Recommended Action: Review Sizing Guide + Update PDP Timeline: 4-8 weeks Confidence: Medium Scenario: Base (HEURISTIC)

Assign to Product Quality Team | **Update Product Detail Page** | **Escalate to Brand Manager**

[View Evidence Panel >]

EVIDENCE PANEL (Level 4) — Opens as drawer from 'View Evidence'

Data type: REAL EXTERNAL EVIDENCE (SRC-01 Amazon reviews, SRC-02 Trustpilot, SRC-05 McKinsey 2023)

Confidence: High for issue direction | Medium for brand-level severity | Low-Medium for impact estimates

Assumptions: (1) Review aggregates reflect genuine experience. (2) Benchmarks applicable to demo brands. (3) Impact estimates are heuristic; not causal.

Synthesized Issue Summary (derived from multiple public reviews): 'Customers consistently report receiving shoes that run half to one full size smaller than expected, particularly in Nike and Adidas running shoes.'

Handoff Packet — Tomas Ivers to Priya Sen (Maker)

What the Maker needs to build from this architecture

FROM	Tomas Ivers — Designer, Kaizen
TO	Priya Sen — Maker, Kaizen
COMPLETED	Product vision (2 blocks); user roles (4 teams); decision flow (6 steps); information hierarchy (4 levels); trust/governance UX (6 patterns); wireframe dashboard; agentic console design; drill-down/evidence panel design. 10 slides total.
IMPLEMENTATION REQUIREMENTS FOR MAKER	Build synthetic dataset (4,200 tx, ~1,200 returns) structured to support: (1) KPIs by brand/product/channel, (2) issue clustering by ISS-01 to ISS-14, (3) recommendation logic for 8 recs with confidence and scenario fields, (4) heuristic estimation model with conservative/base/aggressive columns.
DESIGN RULES FOR HTML IMPLEMENTATION	Dashboard must show Level 1 by default. All drill-downs require explicit click. Evidence panels must be drawers, not inline. All data labels must be colored badges. Synthetic disclosure in exactly one location. Agentic console must be fully interactive with click-to-expand cards.
UNRESOLVED RISKS	(1) Brand color palettes not yet defined — Maker should use Kaizen palette. (2) Mobile responsiveness out of scope for closed demo. (3) Real-time interaction speed depends on HTML JS performance.
CONFIDENCE	High confidence on UX architecture and trust patterns. Medium confidence on wireframe precision — Maker has implementation latitude on visual detail.
